ENERGY MANAGEMENT SERVICES
BUSINESS PROGRAMS

AUDIT SERVICES

This program offers all non-residential electric customers a comprehensive energy audit using a software program designed specifically for businesses. Demand Rate and TOU (Time-Of-Use) customers can receive the services of a technical assistance consultant in addition to the audit.

The computerized energy audit will serve as a benchmark for all commercial customers and provide the majority of small to medium businesses with sufficient data to understand their energy consumption and identify cost-effective energy saving measures.

The technical assistance consultant will be utilized for the Demand Rate and TOU customers that require more specific advice to identify and analyze techniques to improve the electric energy efficiency of their equipment and facility. Customers will work with a Riverside Public Utilities representative in identifying areas of their operations that could benefit from analysis by a consultant, and will jointly develop a scope of work.

All Riverside Public Utilities non-residential electric customers are eligible for an energy audit.

ENERGY MANAGEMENT SYSTEMS

This program provides monetary incentives for energy management system upgrades for non-residential electric customers. Riverside Public Utilities is providing cost sharing incentives to assist the electric customer in technology purchases that can provide energy savings. Projects that promote energy efficiency and energy conservation will be considered individually by Riverside Public Utilities. RPU Staff will determine rebate amount.

**ENERGY MANAGEMENT SYSTEMS ASSISTANCE
INCENTIVE TABLE FOR QUALIFYING PROJECTS**

ANNUAL kWh USE (Aggregated Load)	INCENTIVE (Not to exceed 25% of system cost)
7 million and Over	\$25,000
2.5 to 6.9 million	\$15,000
Below 2.5 million	\$5,000

Table A

The program is available to Riverside Public Utilities non-residential electric customers of record only, with a maximum of \$25,000, not to exceed 25% of the system cost, in incentives (in accordance to the guidelines in Table A) available for one project per account per calendar year.

AUTOMATED METER READING

An internet portal (web site) allows Time-of-Use (TOU) customers to monitor real-time data of their electric use to make both long-term and dynamic decisions about energy usage and price signals.

Real-time monitoring allows major energy customers to:

- Identify anomalies in energy usage
- Improve operational efficiency
- Reduce energy costs
- Make informed purchase decisions
- Take part in real-time pricing programs as they become available

Data will be presented in highly intuitive charts and graphs to provide a clear picture of customers' energy usage. Load profiles can be manipulated graphically to view changes in usage under different conditions, such as on-peak and off-peak periods. Customers can generate load profiles, usage history charts, and a variety of statistics via the Web.

Riverside Public Utilities does not endorse or recommend specific brands, products or dealers; nor does it guarantee material or workmanship; acceptance of such is customer's responsibility.

Program is subject to change without prior notification. Rebates are given on a first come, first serve basis subject to fund availability.
